DETAILED ACTION

Allowable Subject Matter

1. The indicated allowability of claim 1 is withdrawn in view of the newly discovered reference(s) to Dent US Patent No. 5,351,016. Rejections based on the newly cited reference(s) follow.

Drawings

2. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they do not include the following reference sign(s) mentioned in the description: 351, recited in the description page 6, line 176. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the

Art Unit: 2637

invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over applicant's admitted prior art fig. 1 in view of Dent US Patent No. 5,351,016.

Applicant's admitted prior art fig. 1 discloses a method and apparatus comprising generating a first quadrature data symbol ; generating a second quadrature data symbol; generating a first in-phase data symbol and second in-phase data symbol see lines 65-68. However, Applicant's admitted prior art does not teach the first and second quadrature data symbol, the first and the second inphases data signals are compensated using based on the alpha, epsilon and gain, respectively. In the same field of endeavor, Dent teaches compensating Q and I channels using A (gain), T (alpha) and K (Epsilon). See fig. 3 and col. 7, line 61- col. 8, line 12. Given that fact, it would have been obvious to one skill in the art to incorporate such a teaching in Applicant's prior art fig. 1, so as to continually and interactively adjust and compensate for mutable modulation inaccuracy and errors as taught by Dent see col. 5, lines 60-62.

Allowable Subject Matter

5. Claims 2-7 are allowed.
